

## *Identibar*<sup>TM</sup> Alloy Identification System

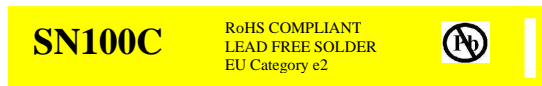

**YOU'VE PICKED NOW DON'T MIX!**

DKL Metals Ltd have introduced a unique easy-peel labelling system called *Identibar*, which ensures that each bar is colour-coded dependant on alloy type. The following chart shows the *Identibar* label styles.

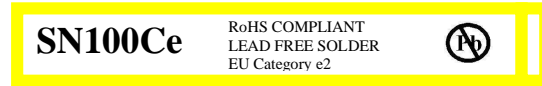

Front of bar

Back of bar

SN100C (copper containing)

SN100Ce (copper free)

E-Qual 96TSC (copper containing)

E-Qual 96TS (copper free)

E-Qual 97TSC (copper containing)

E-Qual 97TS (copper free)

Lowsac Y (copper containing)

Lowsac Ye (copper free)

Using the *Identibar* system helps ensure that your operators use the *right* bar in the *right* machine every time. Especially important where you are using Lead - Free and Leaded bar in the same facility!

The bar label, when removed can be used for stock-control/QC management as it can be stuck on to machine consumption records. This ensures accurate recording of total solder usage in individual machines.
